

ANANDHALAKSHMI PA

SOFTWARE DEVELOPMENT ENGINEER 2 | FULL STACK AI DEVELOPER | Website : anandhalakshmi.me

Phone : 9488126089 | E-Mail : anandhalakshmip16@gmail.com | LinkedIn : <https://www.linkedin.com/in/anandhalakshmip>

SUMMARY

I am a Full Stack Developer with 3.5 + years of experience delivering scalable, cloud-integrated web applications end to end. I build intuitive user experiences with React and engineer reliable backend services using Java Spring Boot along with Agentic AI systems. I am currently pursuing an M.Tech in AI & ML and actively apply emerging technologies to develop practical, production-ready features. I continuously upskill, adapt to new tools, and drive automation and performance improvements in a cloud-first environment.

SKILLS

- **Frontend Development:** React.js, Next.js, Redux, TypeScript, Responsive UI, Micro-Frontend Design Pattern, Unit Testing
 - **Backend & APIs:** Java, Spring Boot, JPA, Data Base Management, Restful APIs, Microservices, Event Driven Architecture
 - **Others:** GCP, Apache Kafka, Git, Docker, System Design, Agile Framework, OOPs, Data Structures and Algorithms.
-

EXPERIENCE

Software Development Engineer II at Rocket (Formerly Mr.Cooper), Chennai

April 2026 – Present

- Driving development of Pyro Vault, a distributed system managing billions of mortgage records using agentic workflow orchestration.
- Architected LLM orchestration pipelines using Apache Kafka and Redis queues, enabling scalable, asynchronous AI-driven document processing.
- Designed resilient event-driven workflows with retry strategies, failure isolation, and queue-based load leveling to ensure reliability of long-running AI processes.
- Integrated LLM services into backend decision systems, improving document validation accuracy and reducing manual effort.

Software Development Engineer I at Mr.Cooper, Chennai

Jul 2023 – Mar 2026

- Core contributor to Pyro AI, an enterprise document intelligence platform built with React and Spring Boot for high-scale mortgage workflows.
- Reduced system timeouts to near zero (~100%) by redesigning a tightly coupled architecture into an event-driven system, significantly improving reliability under load.
- Built and scaled microservices using Java, Spring Boot, and GCP Pub/Sub, enabling high-throughput asynchronous processing.
- Implemented CQRS architecture with AlloyDB, improving performance and enabling independent scaling of read/write workloads.
- Orchestrated distributed workflows using Temporal for reliable execution of long-running, stateful processes.
- Co-developed AI Guardian, a secure AI validation platform to govern LLM usage across business workflows where I built validation pipelines to verify and score LLM outputs, improving reliability of AI-driven decisions. Enabled compliance and responsible AI adoption by introducing guardrails and monitoring mechanisms.
- Improved batch processing efficiency through parallelization and multithreading, reducing latency.
- Led end-to-end feature delivery: requirements, design, implementation, and production rollout.

Software Engineer Intern at Mr.Cooper, Chennai

Jan 2023 – Jun 2023

- Built a real-time messaging platform using Next.js, Express.js, Redis, and Google SSO.
 - Designed scalable backend communication using Redis-based pub/sub and caching strategies.
 - Delivered production-ready features in Agile environments with focus on performance and usability.
-

EDUCATION

- Masters of Technology in Artificial Intelligence and Machine Learning (WILP) at **Birla Institute of Technology & Science**
Oct 2025 - Present. | 8 CGPA
 - Bachelors of Technology in Information Technology at **Thiagarajar College of Engineering (Anna University)**
Jul 2019 – May 2023 | 9.2 CGPA
-

CERTIFICATIONS

1. Certified on SpringBoot and Java (Udemy)
2. Certified in Web Development with React (Udemy).
